

Colocation

Our colocation services allow you to house your own hardware in our premium data centres and utilise our high-speed connectivity. We can cater for requirements ranging from single servers right up to secure racks and cages housing many 10's, or even 100's, of machines. Using your own hardware enables you to take complete control of your hosting operation, allowing you to pick and choose best-fit partners for each element of your bespoke solution.

We have multiple data centre sites each with unique features that appeal to different budget requirements. Our ultra high security facilities are ideal for financial applications, secure data storage and critical availability requirements, whereas our cost-optimised sites enable large clusters of high throughput services whilst still maintaining excellent reliability. In addition to this, we have space within all major UK carrier hotels and have deployed extensive connectivity throughout.

Your equipment will be fed with redundant power supplies and network connections, all backed up by a comprehensive service level agreement. All our facilities feature comprehensive security, both on the perimeter of the site and within the buildings, and operate sophisticated environmental controls to ensure your equipment is kept at a temperature and humidity where it can operate at its best. We give you access to highly trained engineers 24 hours a day to carry out maintenance tasks on your behalf allowing you to minimise technical staff overheads.

To find out more about our range of colocation services please call or email team of specialist advisers who will be happy to discuss your requirements in more detail.
